

Filip Nordqvist

What do I want to learn or understand better?

Project: I want to become better at writing clean and effective Javascript and to become better at creating layouts that work for both desktop and mobile users.

Agile: I want to become better at creating vertical user stories that give as much value as possible to the product owner.

How can I help someone else, or the entire team, to learn something new?

By trying to learn as much as possible about the frameworks that we work with I believe that I can better help me team members if they need help or want to learn something new. I also try to share my knowledge about software engineering in general. Additionally I am active in the communication channels that we use so if anyone is wondering something there I will be able to respond quickly if I know how to help.

What is my contribution towards the team's use of Scrum?

As before I have attended all of our meetings, created several tasks in trello and been active in the sprint planning and evaluation.

What is my contribution towards the team's deliveries?

I completed all my tasks this week and I also helped with other tasks. Among many things I have done the following:

- Added a Datepicker component to the new booking and made it possible to add new bookings from the frontend to the backend through a POST request.
