

Individual Reflection - Week 4

Gustav Vadström

What do I want to learn or understand better?

This week's focus has been on understanding and starting the development of spring and java persistence api frameworks. How database models are created and queried in JPA, as well as how endpoints are defined in spring. For the next week, I would like to understand better how tests are written using JPA and spring.

How can I help someone else, or the entire team, to learn something new?

I help the team by contributing to the development and doing tasks from the Scrum board. I also contribute by helping with the document deliveries.

What is my contribution towards the team's use of Scrum?

We have all been focusing on creating relevant user stories and tasks for this week's development. We have distributed the tasks over the people in the group, and I have contributed by doing my part.

What is my contribution towards the team's deliveries?

My contributions towards the team's deliveries has been to develop endpoints in the spring restful api. I have also participated in creating the team's weekly review.
