

Viktor Berggren

What do I want to learn or understand better?

I would like to better learn about how it is working with creating a software project with an external customer. I would also like to learn better how to implement the Scrum framework in a project like this and ideas on how to improve its implementation along with progress of the project. Along with this I would also like to learn more about React and JavaScript as this is what will be used for the front-end. Additionally I also want to learn about Spring Boot as this will be used for our back-end. Lastly I also want to learn about the process of connecting a database to the website we're making.

How can I help someone else, or the entire team, to learn something new?

I can help the team with my knowledge of programming in the different languages and frameworks. I also believe I can help by contributing ideas and solutions to different problems that will arise both with the code and the project itself.

What is my contribution towards the team's use of Scrum?

I helped with organising our channel of communication to better prepare for the start of the Scrum process. I was also attending all the meetings we had planned for the week. In the future I will also contribute to the use of Scrum by following the routines and policies in the Social Contract as well as doing my part and updating the backlog and Trello we have.

What is my contribution towards the team's deliveries?

This week's delivery was the Social Contract. I contributed with the Social Contract by first creating the original document used for it and then contributing in general with different ideas and routines. Additionally, I helped by looking up what schedule we had after Easter to aid with scheduling for the weekly meetings.
