

Individual Reflection - Week 5

Gustav Vadström

What do I want to learn or understand better?

This week I have started to work a little bit on the frontend-side of the application as well. I have focused on understanding how React and the layout of different elements and components work. I would like to understand Primereact and how the css grid system works.

How can I help someone else, or the entire team, to learn something new?

I can help the team by describing how the technical part of the work is done, as well as answering questions.

What is my contribution towards the team's use of Scrum?

We have set meetings where we dedicate time on setting up User Stories, creating tasks, and selecting which ones to do in the beginning of the week. After that, everyone will eventually select the tasks they prefer.

What is my contribution towards the team's deliveries?

This week, I have been focusing on implementing bookings in the backend system and creating GET endpoints for use in the frontend application. After that, I have moved on and started to work on the frontend application to display information about individual bookings.
