

Individual Reflection – Week 3

- what do I want to learn or understand better?

I want to learn more about Spring boot and how to connect this with React. Regarding the Scrum framework I want to understand how to make proper user stories, as we were told we made them a bit too ambiguous.

- how can I help someone else, or the entire team, to learn something new?

I can look further into the scrum framework and make sure that we utilize appropriate tools for agile work. When it comes to programming my competences fall short compared to the IT-students who show interest for programming in their spare time. However, I believe I can contribute in other aspects as mentioned.

- what is my contribution towards the team's use of Scrum?

To contribute in the Scrum process, I took part in all meetings from planning to reflection, as well as group programming and tasks. Prior to the reflection meeting I took responsibility to check up what should be included as well as put down a number of bullet points and reflections to drive the discussion and reflection during the weekly reflection meeting.

- what is my contribution towards the team's deliveries?

This week I contributed by programming "ActivityController" and "ActivityService" together with Sara, as well as I did preparations for our weekly reflection to make sure we discussed the matters that was the most relevant for this week and we were asked for.
