

Filip Nordqvist

What do I want to learn or understand better?

Project: I want to understand React better so I can deliver a well written application. I would also like to understand Spring Boot better but I am currently focusing on the frontend part of the application.

Agile: I want to learn how to create solid user stories and to break them into good tasks.

How can I help someone else, or the entire team, to learn something new?

By trying to understand the frameworks that we work with I believe I can better help my team members if they stumble upon a problem or if they are wondering something about the frameworks.

What is my contribution towards the team's use of Scrum?

I have been active in the discussions regarding our user stories and the creation of tasks. I have also finished all my tasks that I planned to do.

What is my contribution towards the team's deliveries?

I have done five main things this week.

- Project setup - I created a base project which includes both the frontend and backend.
- Basic routing - Added basic routing to the application.
- UI-libraries - Searched and found several UI-libraries that could be used for our project.
- Navigation - Together with a team member I have added basic navigation to the calendar view.
- Contributed to the weekly team reflection.
