

Filip Nordqvist

What do I want to learn or understand better?

Since we are nearing the end of the course I would like to learn how to effectively wrap up the project and how to present the product. Besides this I still want to become better at writing clean and effective Javascript for web development.

How can I help someone else, or the entire team, to learn something new?

By trying to learn as much as possible about the frameworks I can more easily help my members of my group if they stumble upon a problem.

What is my contribution towards the team's use of Scrum?

I participated in every meeting, created several tasks, estimated the cost of tasks and I helped some of my group members with their tasks.

What is my contribution towards the team's deliveries?

I completed all tasks that I signed up for and I also solved several issues that we had with the code. More specifically I created a method for handling error codes from the backend API and added error messages that are displayed to the user if an error occurs.
