

Viktor Berggren

Week 6

What do I want to learn or understand better?

I would like to better understand the libraries and components we use to style the website. That is general CSS, PrimeFlex and PrimeReact. I want to learn more about this so I can better understand the structure of the frontend components and how to style them to make them look fashionable and fitting for the customer's purpose.

How can I help someone else, or the entire team, to learn something new?

I can and will further continue to help my team learn something by sharing my knowledge of Spring, JPA, Java, JavaScript, React and axios for React.

What is my contribution towards the team's use of Scrum?

As normal I attended all the meetings for the week and I was on time for all of them. On the sprint-planning I helped with Scrum poker and defining tasks for the user stories this week. Additionally, I continuously updated our Scrum board when different criterias and tasks were finished.

What is my contribution towards the team's deliveries?

This week I contributed on both the front- and backend in the project. It was mostly the backend that I contributed to. In the backend I added postmapping (HTTP request to insert value to the database) to booking and made it work for different cases. Furthermore, I also added the method in the frontend that should be called when a new activity is to be created and inserted into the database.
