

### What do I want to learn or understand better?

There are several things that I want to learn/understand better in this course. My main focus in this course will be to learn how to work with agile software development, to learn and understand the routines of agile software development. It will also be rewarding working with a full-stack project.

### How can I help someone else, or the entire team, to learn something new?

This is a hard question. However I believe that if you recognize that people have different skills and experiences it is easier to understand their needs which will enable you to help your team members in a more efficient way when a problem arises.

### What is my contribution towards the team's use of Scrum?

I try to learn and understand the use of Scrum. This lets me be active in the discussion that we have. I also attended the first workshop.

### What is my contribution towards the team's deliveries?

I have contributed to the social contract, created a repository on Github that the project will use and I have been searching for tutorials matching our project.
