

Individual Reflection- Week 5

Summary of the week

During this week, we had our first real sprint. Initially, three User Stories were selected, however, due to the group's efficiency, we manage to complete a total of four User Stories. We manage to display all bookings, activities' prices, individual bookings, and add new bookings. The application retrieved data from the database and then displaying it via React on the website.

What do I want to learn or understand better?

I believe I want to learn how to utilize the KPIs:s better to improve our way of working. Currently, I feel that they are not very valuable. Additionally, I want to increase my knowledge in React, and further my competence in creating Acceptance Criteria.

How can I help someone else, or the entire team, to learn something new?

I try to do my best to learn more about React to help team members and pass down the knowledge I have accumulated. As I have contributed much to the Team Reflection each week, I also try to spread this knowledge to the rest of the team.

What is my contribution to the team's use of Scrum?

I always try to stress the importance of using Scrum. For instance by trying to emphasize the use of Tasks and Acceptance Criteria. Furthermore, I always try to make sure that the User Stories are following the INVEST criteria, to ensure that the product owner can be presented with functioning features at the end of each sprint.

What is my contribution to the team's deliveries?

This week I completed a User Story by myself. It was great to see that I have finally understood the concepts of React and its connection to Springboot. Additionally, I made a substantial contribution to the Team Reflection. Furthermore, I set up the burndown chart (one of the selected KPI:s) and gathered relevant data for it. Moreover, I also plotted each individual's time on the project, in order to better understand the workload for each individual.
