

Viktor Berggren

Week 8

**What do I want to learn or understand better?**

Now that we're nearing the end of the course meaning the presentation and final team reflection is to be made the focus changes a little. Now I would like to learn how to present our product well for the presentation and how to demo it in a way that shows the features and values of the program well. Programming-wise I would say it's the same as last week. Learn more about how to style the program well so it visually better represent and show what wants to be seen by the customer.

**How can I help someone else, or the entire team, to learn something new?**

Like last week I can continue to help my team learn things by explaining how different aspects of the program work. I can also continue to help with Git and my knowledge therein.

**What is my contribution towards the team's use of Scrum?**

Like the previous weeks I attended all meetings and were on time on all of them. I helped with estimating user stories via Scrum Poker and helped create tasks for the user stories. I also continuously updated the tasks I was assigned when progress on them were made. Furthermore, I also filled out the weekly poll for both the course and how many hours spent coding.

**What is my contribution towards the team's deliveries?**

This week my contribution was mostly on the frontend as I and Sara updated our view for individual booking so you now also can update bookings. This was mostly frontend stuff to make it editable and send correct values to the backend. There was also some backend both with the individual booking view and some other stuff. We decided to change how our backend responds to the frontend and will continue to implement this to show more relevant error messages.
