

Simon Andersson

What do I want to learn or understand better?

Now that we are at the end of the course I can say that I have learned a lot about scrum, working in a team and the tools we have used. I'm gonna use those new abilities in my future project and while continuing using scrum I am going to get better at it. The same applies to the frameworks and tools we used during this project. I will keep using Spring and React when creating websites. Since we only made a minimal viable product (MVP) I want to go further and learn how to take it from a MVP to a full product. To produce a website I also need to understand how to publish a product to the web and use the cloud for managing databases.

How can I help someone else, or the entire team, to learn something new?

If someone has a bug they share their screen on discord and I can help them fix the problem. I can also help them learn something new by linking tutorials they can follow.

What is my contribution towards the team's use of Scrum?

We have three meetings every week where we all get together in discord and plan our sprint for the week. I contribute by taking part in the meetings and making tasks for the week.

What is my contribution towards the team's deliveries?

I have worked on tasks from the Trello board, this week I fixed a bug in the backend that occurred because we used the activity name as a primary key in the database. I changed this to an id so that every activity has a new unique. This week we also made the presentation demo.
