

Filip Nordqvist

What do I want to learn or understand better?

Project: I want to learn how to organize the UI in a way that allows the user to have a good working flow. I also want to become better at creating effective and clean JavaScript.

Agile: I want to become better at breaking up user stories in tasks.

How can I help someone else, or the entire team, to learn something new?

More or less the same as last week. By staying active and trying to learn about the tools we use I might be able to help my team members if they get stuck on a problem. I will also try to document my code in such a way so my team members easily can understand what each component/method does.

What is my contribution towards the team's use of Scrum?

I have created tasks for the trello board, been active in the sprint planning and evaluation.

What is my contribution towards the team's deliveries?

This week I have completed my tasks and helped other people with their tasks.

- Created a new booking view - Created a layout, added components and got relevant data to some components from the backend.
