

Individual Reflection – Week 6

- what do I want to learn or understand better?

My task this week included frontend and programming with JavaScript, and I noticed that it takes me a significant amount of time to write code when I need to search for everything. Because of this I want to understand JavaScript better. However, I believe the best way is to learn by doing so I will have to continue with this practice.

- how can I help someone else, or the entire team, to learn something new?

I believe that through learning JavaScript and react better I will be able to help others in the group as we are several members who find this to be hard.

- what is my contribution towards the team's use of Scrum?

I took part in all meetings from planning to reflection, as well as group programming and tasks. Prior to the reflection meeting I took responsibility to write down a number of bullet points and reflections to drive the discussion and reflection during the weekly reflection meeting. Additionally, I analyzed the KPIs to see if we should take any measures to even affect them.

- what is my contribution towards the team's deliveries?

This week I contributed by programming the display of total price and has been working on the price calculation. I also did preparations for our weekly reflection to see if we succeeded with our measures "C", and what we should work on improving next week.
