

Individual Reflection- Week 8

Summary of the week

This week we added many new features to the web application. The customer can now create new bookings, delete them, and edit them. Additionally, the customer can create new activities, delete activities, and modify. Furthermore, there are many different views to convey information such as when bookings have been created. Moreover, the customer can receive an email when creating a booking. Thus, the web application is soon to be finished according to the Product Owner's requirement.

What do I want to learn or understand better?

I believe I want to learn more about Scrum and how to program in Spring Boot. I feel that I am content with the knowledge I have received in this course when regarding React.

How can I help someone else, or the entire team, to learn something new?

I help the team by trying to come up with good solutions when regarding the front end. Furthermore, I try to bring new perspectives both from literature and other practical experience when discussing how to use the Scrum framework.

What is my contribution to the team's use of Scrum?

As previous week I always try to highlight the use of Scrum. I try to incorporate the practices when planning and reviewing the sprints. Additionally, when doing task breakdowns, I try to ensure that they follow the INVEST criteria.

What is my contribution to the team's deliveries?

This week Viktor and I completed a User Story together, that were estimated to 30 story points. The user story was cumbersome at first sight, however, after a couple of hours we have solved the issue. Furthermore, I have contributed a great deal to the team's weekly reflection. I try to give the reflection different nuances and reflect over how the project process have developed over the few weeks. Additionally, I try to help structure the tasks as the project will soon end.
