

Individual Reflection – Week 5

- what do I want to learn or understand better?

I want to understand how to modify the database from the website, and how to develop code to allow this. I also want to learn more about trustworthy sites to look up code, as I feel like I have a lack of knowledge and experience in this compared to other groupmembers.

- how can I help someone else, or the entire team, to learn something new?

I can help someone else in the group by setting the focus on customer value. The past week I feel like this focus has fallen a bit behind because of an eager to achieve numbers of commits. Myself I should try to stay more ahead in looking up tutorials and example code, because I really do feel like I am falling behind when we talk about coding, despite my genuine effort to understand.

- what is my contribution towards the team's use of Scrum?

This week I had the same contributions as last week; I took part in all meetings from planning to reflection, as well as group programming and tasks. Prior to the reflection meeting I took responsibility to check up what should be included as well as put down a number of bullet points and reflections to drive the discussion and reflection during the weekly reflection meeting. Additionally, I took measures to make our KPI monitoring systematic through clarifying them and creating a form in which we can monitor them and gave description on how they could be interpreted.

- what is my contribution towards the team's deliveries?

This week I contributed by programming methods in "ActivityController" and "ActivityService", as well as I did preparations for our weekly reflection so that we reflected upon some of the same areas as last week to see if we succeeded with our measures "C".
