Rasmus Otterlind Individual reflection Week 9

What do I want to learn and understand better?
I want to learn how to make an MVP with more planning so that it does not get as stressful.
We planned well considering we've never done this before but some features were
implemented at the last minute. But these features were not as essential as the ones
implemented in the earlier weeks but they were fun to include in the final product.

How can I help someone else, or the entire team, learn something new?
I can help people understand how to make a responsive frontend that gives feedback
through the react framework.

What is my contribution towards the team's use of Scrum?
I've helped with sprint planning and evaluation and I've done my tasks and helped other
people with their tasks.

What is my contribution towards the team's deliveries?
I've written parts of the weekly reflection and I'm helping to prepare for the
demonstration/presentation next week. And I also did a lot of coding this week. I fixed bugs
and polished the frontend views and added some feedback and created a login screen.
