Individual Reflection - Week 2

Gustav Vadström

What do I want to learn or understand better?

The main focus of this week's learning is to understand the domain model and the individual software frameworks we're going to use in the project. We have created the first mock-up of the project which should reflect the scope of the project as well as possible. I have also focused on learning the process of Scrum, and how you should define User Stories.

How can I help someone else, or the entire team, to learn something new?

By participating in the project, I can help the team by offering my help and contributing to the project wherever needed.

What is my contribution towards the team's use of Scrum?

The agile working progress has not yet started, so my future contribution to the use of Scrum will maintain the same. I will finish my tasks in time and offer my help whenever possible. This week I have participated in discussions regarding User Stories to help the pre-work of Scrum.

What is my contribution towards the team's deliveries?

This week, I have been actively participating in discussions regarding Scrum, User Stories, and creating the first Mock-up version. I also began learning Reactjs and Spring to know as much as possible before the actual development of the project.
