Individual Reflection – Week 7

- what do I want to learn or understand better?

I want to understand how our front end libraries work better, as I had quite a lot struggle with my task on calculating price in frontend, where information had to be "hooked". Although I read quite a lot about hooks on different websites I could not quite implement it in my own work. Therefore I want to learn this method and how to use it in practice.

- how can I help someone else, or the entire team, to learn something new?

I believe that I can help my team by actively encourage the agile work processes and activities of the Scrum framework. through learning JavaScript and react better I will be able to help others in the group as we are several members who find this to be hard.

- what is my contribution towards the team's use of Scrum?

I took part in all meetings except from the reflection as I had to fly to Switzerland for the European Champs in orienteering. Beyond that, and working with group programming and my task, I participated in estimating the user stories by playing Scrum poker and sharing my opinion on different tasks and stories' scopes and difficulty level to discuss the respective task/stories point of the weeks burndown amount.

- what is my contribution towards the team's deliveries?

This week I continued with my work on the price calculation which turned out to be more challenging than I had expected, as it was dependent on the booking duration which was not yet implemented correctly. I also had to investigate how to operate in frontend and collecting data from frontend as well as backend to calculate the price. Eventually Simon helped me out, and he talked me through how he did it, while I explained the code I had written and the hinders I had met.
