Viktor Berggren
Week 7

What do I want to learn or understand better?
Like last week I want to continue to learn more about the libraries we use in the frontend to style the website. Additionally, I would like to learn more about the communication between frontend and our API. More specifically it is PUT request (updating an already existing item in the database) that I would like to learn more about. This is because we want to put JSON data but I've yet found out how it works but from forums and videos I know it should work.

How can I help someone else, or the entire team, to learn something new?
Like last week I can continue to help my team learn things by explaining how different aspects of the program work, moreso on the backend than the frontend. Furthermore, I can help my teammates make knowledge stay by continuously reinforcing the practices of agile working and Scrum.

What is my contribution towards the team's use of Scrum?
Firstly, I attended all the meetings of the week and was on time for all of them. I also attended an extra code meeting we had on tuesday morning. Secondly, I also helped out the team with estimating user stories with Scrum poker and also by creating tasks for the user stories. As usual, I also continuously updated the tasks when progress on one was made.

What is my contribution towards the team's deliveries?
This week's contribution was more focused on the backend than the frontend but there were still some minor additions to the frontend from me. The largest addition was the implementation of email for a customer and an email service to go with it. So setting up and email and when a new booking is made, the customer will get an email with information about the booking. To the frontend I had some minor contributions with a PUT request to update whether a booking is paid or not and also a POST request to insert a new activity.
