Rasmus Otterlind Individual reflection Week 8

What do I want to learn and understand better?
I want to learn more about how to present our product and make a good demo before the final presentation. I still have things to learn in terms of programming but it's not always the focus to learn new things when trying to deliver value to the customer.

How can I help someone else, or the entire team, learn something new?
I can help my team by explaining how different parts of our program work. Especially in the front end as that's where I've spent most of my time programming.

What is my contribution towards the team's use of Scrum?
I helped others with their tasks and I got help from others with my tasks and got them done. I helped with sprint planning and evaluation at the start and end of the week.

What is my contribution towards the team's deliveries?
I worked on the front end of the application as usual. I created several datatables to see old bookings, cancelled bookings and active/new bookings. After that I implemented a feature to allow removal of activities that you have created which required a bit of work as it required changes to the database, backend and some restructuring of the front end as well. Everything updates dynamically and works. So the week went smoothly and I feel good about my contribution to the project.
