Individual Reflection- Week 6

Summary of the week

Similar to last week, we managed to complete four User Stories. The website is now having a lot of functionality. As usual, we had a sprint planning meeting, mid-meeting, and a sprint review. However, this week, the product owner was attending during the mid-meeting. Thus, some additional requests were desired in form of functionality.

What do I want to learn or understand better?

I want to enhance my knowledge of React. This week I completed a whole User Story myself, after working some hours on PrimeReact and their library. The User Story was very simple after having understood PrimeReact (an additional feature of React). If not, the User story would have been very hard to solve.

How can I help someone else, or the entire team, to learn something new?

I think I have introduced some simple ways to connect the application with the database. I hope this has helped the team to learn something new. Furthermore, I believe I have helped the team with a fundamental structure of how dialog boxes can appear in the application.

What is my contribution to the team's use of Scrum?

I always try to highlight the importance of Scrum. We have started to play ScrumPoker every Monday to estimate our User Stories. The KPIs have also been monitored more closely, and there is now a consensus on how to keep track of them.

What is my contribution to the team's deliveries?

I managed to complete another User Story by myself. Additionally, I believe I was contributing by attending the meeting with the Product Owner. I tried to understand the customer's needs and give various perspectives on the problem. Thus, making it easier for the team to understand the problem the customer wanted to solve. Furthermore, I contributed the Team Reflection, not as much as the previous weeks though.
