Viktor Berggren
Week 5

What do I want to learn or understand better?
I would like to learn more about axios in React. This is to better understand the connection between the frontend and backend and how the frontend interpretes the data from the backend. More specifically I would like to know how to use axios updating and adding (PUT and POST) data to the backend. I would also like to learn more about PrimeReact, so that I can better style the web application.

How can I help someone else, or the entire team, to learn something new?
Like last week I can continue to help team members by explaining elements of Spring Boot and JPA and further explain how methods work in the backend. I can also help my team members with my knowledge of git to help get things committed and pushed correctly to the repository.

What is my contribution towards the team's use of Scrum?
I continued to help with the team's channel of communication by updating it such as removing messages posted in the wrong channel (to keep it clean) and updating information such as meeting times and documents. Additionally, I helped with adding tasks for this and next week's sprint and also estimating the workload of different user stories. Lastly, I also helped by continuously updating our Trello board along with the progress of tasks and user stories.

What is my contribution towards the team's deliveries?
This week we continued programming on the project. This week was more focused on the frontend where I helped implement the page for viewing activities. I also added documentation to some methods I wrote last week in the backend. Furthermore I added more methods in the backend for updating and adding entries in the database to prepare for next week's sprint.
