Individual Reflection – Week 2

Summary of the week

The second week we were agreeing on a project scope. We have had several meetings where we specified the project scope, how we will work, and a mockup of the project.

- what do I want to learn or understand better?

I want to learn more about front-end programming and react, as well as understand how the different parts of codes are connected and cooperate, as this is still very abstract to me. Regarding the Scrum framework I want to understand how to utilize and apply it in practice and get some deeper insight on the advantages it gives to agile software projects.

- how can I help someone else, or the entire team, to learn something new?

I believe I can help others in the group to understand customer value and business models. After I have done the assigned tutorials I hope to be able to help others in the group understand them. I have payed attention during lectures and has helped the group stick to the frames and scope that has been presented on lectures.

- what is my contribution towards the team's use of Scrum?

My contribution this week was more about presenting ideas on how we could form our scrum team regarding different roles. I want to encourage a positive attitude towards problem-solving, and keep a focus on driving the project forward as well as keeping the spirits up despite facing challenges.

- what is my contribution towards the team's deliveries?

This week I wrote the description of the project scope, validated the business model, and participated in the development of the mockup that we developed during a meeting.
