Individual Reflection- Week 4

Summary of the week

During this week we strived to implement at basic application, connecting Springboot and React as well as the Database. Additionally, we started to implement the calendar view.

What do I want to learn or understand better?

I want to learn more about React and Springboot and how to efficiently implement them for the sake of the project. Additionally, I want to increase my knowledge in how to break down Epics to User Stories according to the INVEST criteria. This was a challenge for this week's sprint, as none of us hade any previous knowledge in how to do this efficiently.

How can I help someone else, or the entire team, to learn something new?

As stated in the previous week, I always try to help the team with the implementation of Scrum. Sometimes this is forgotten due to the coding and creation of a project. However, by reminding my team members of the framework, we continuously learn more about Scrum and how to work according to agile practices.

What is my contribution to the team's use of Scrum?

As stated in the first week, I still believe I can contribute to the team's use of scrum by learning more about the framework and propose the implementation of various Scrum methods that might be relevant for our project.

What is my contribution to the team's deliveries?

This week I helped with some of the coding and the planning of the sprint. Additionally, I made a substantial contribution to the Team Reflection. Furthermore, I attended the meetings and helped the team follow up tasks made.
