Viktor Berggren
Week 4

What do I want to learn or understand better?
I would like to learn more about React and JavaScript so I will be well prepared if and when I will start working with it. I would also like to learn more about the connection between backend and frontend. The part I am most interested in learning is in what format the frontend will see the data retrieved from the backend.

How can I help someone else, or the entire team, to learn something new?
I can help my team with my knowledge of Spring Boot and JPA to help others with implementing the API, methods and tables needed for the backend. Furthermore I can be of general help by providing ideas for solutions to different problems with backend, frontend and the project in general.

What is my contribution towards the team's use of Scrum?
I continued to help with organising our channel of communication to better prepare for the start of the coding process. I did this by creating multiple voice channels so it is easier to work together in smaller groups without everyone talking over each other. I also added and updated our Trello board with new tasks. Additionally, I kept them updated during the week when progress was made.

What is my contribution towards the team's deliveries?
This week we started programming on our project. My contribution was on the backend where I started by creating empty shells of classes to help with the start of implementation after the database was designed. Additionally, I helped with creating the database by helping in the design of an ER-diagram and conversion from ER to a relational schema. I also implemented the first version of the Customer table in the backend and helped with implementing the Activity table as well.
