Simon Andersson

What do I want to learn or understand better?

I have learned a lot about the Spring Boot framework and ReactJS during the last two weeks. I'm currently focusing on learning ReactJS and the connection with the rest-full api we have implemented with Spring Boot. For that I need to learn and understand how ReactJS functions and hooks work with. Also how to save the data with states and send them to the calendar component.

How can I help someone else, or the entire team, to learn something new?

When someone has a problem with the project they ask questions in our communication channel Discord. If I get time I can help them with the specific problem.

What is my contribution towards the team's use of Scrum?

I have taken part in the three meetings we have agreed and discussed how we should use our sprint board to get user stories done. I have also done some tasks from our Trello that we estimated should be done this sprint.

What is my contribution towards the team's deliveries?

We have completed the weekly team reflection and made user stories for our product. We have written some tasks and estimated that they can be done during the sprint. I have completed some of those task and our team has delivered a basic web application.
