# Individual Reflection- Week 7

**Summary of the week**

As usual we had three meetings during the week, sprint planning meeting, mid-meeting and sprint review meeting. During the spring planning meeting we decided to incorporate some additional User Stories which were requested by the Product Owner/Customer the previous week. Coding were conducting in the usual manner and a great communication were held through discord throughout the week. During the sprint review meeting the team realized that some of the US was not completed, as some bugs and missing functionality were found.

**What do I want to learn or understand better?**

I still want to understand more in React. I have learned much more since the first week of the project. However, as the project's complexity increases, the degree of knowledge required is increasing as well. Thus, I really want to further enhance my knowledge in React. Additionally, I want to understand how to better incorporate the Scrum framework.

**How can I help someone else, or the entire team, to learn something new?**

I mostly help by providing the team with new ideas and thoughts during the discussions. Additionally, I try to help as much as I can when coding. However, I must admit my knowledge is far behind some of the other group members.

**What is my contribution to the team's use of Scrum?**

I try to push the team to break down the User Stories in task, and play Scrum Poker in order to estimate the User Stories. Additionally, I try to point out the importance of Acceptance Criteria, Standardization of Tests etc. However, it feels like most of the team is already putting a great deal of effort at this project, so it seems infeasible putting more administrative tasks on the team.

**What is my contribution to the team's deliveries?**

This week I managed to complete the User Story "Enable the status of a booking as paid or not in all bookings". I received a great deal of help as I had some troubles with the User Story. However, everything was solved for the Sprint Review meeting. Additionally, I did most of this week's Team Reflection. Moreover, I updated the KPI:s, such as the burndown chart etc.
